Liquid Staking Solution
for Agro Commodity

Real-World Assets (#RWAs)

We are like 'Lido' that allows staking of stable coins to achieve up to 12% APY

Problem (for Non-Perishable Agro Commodity* producers)

Smallholder farmers sell produce in **distress** sale

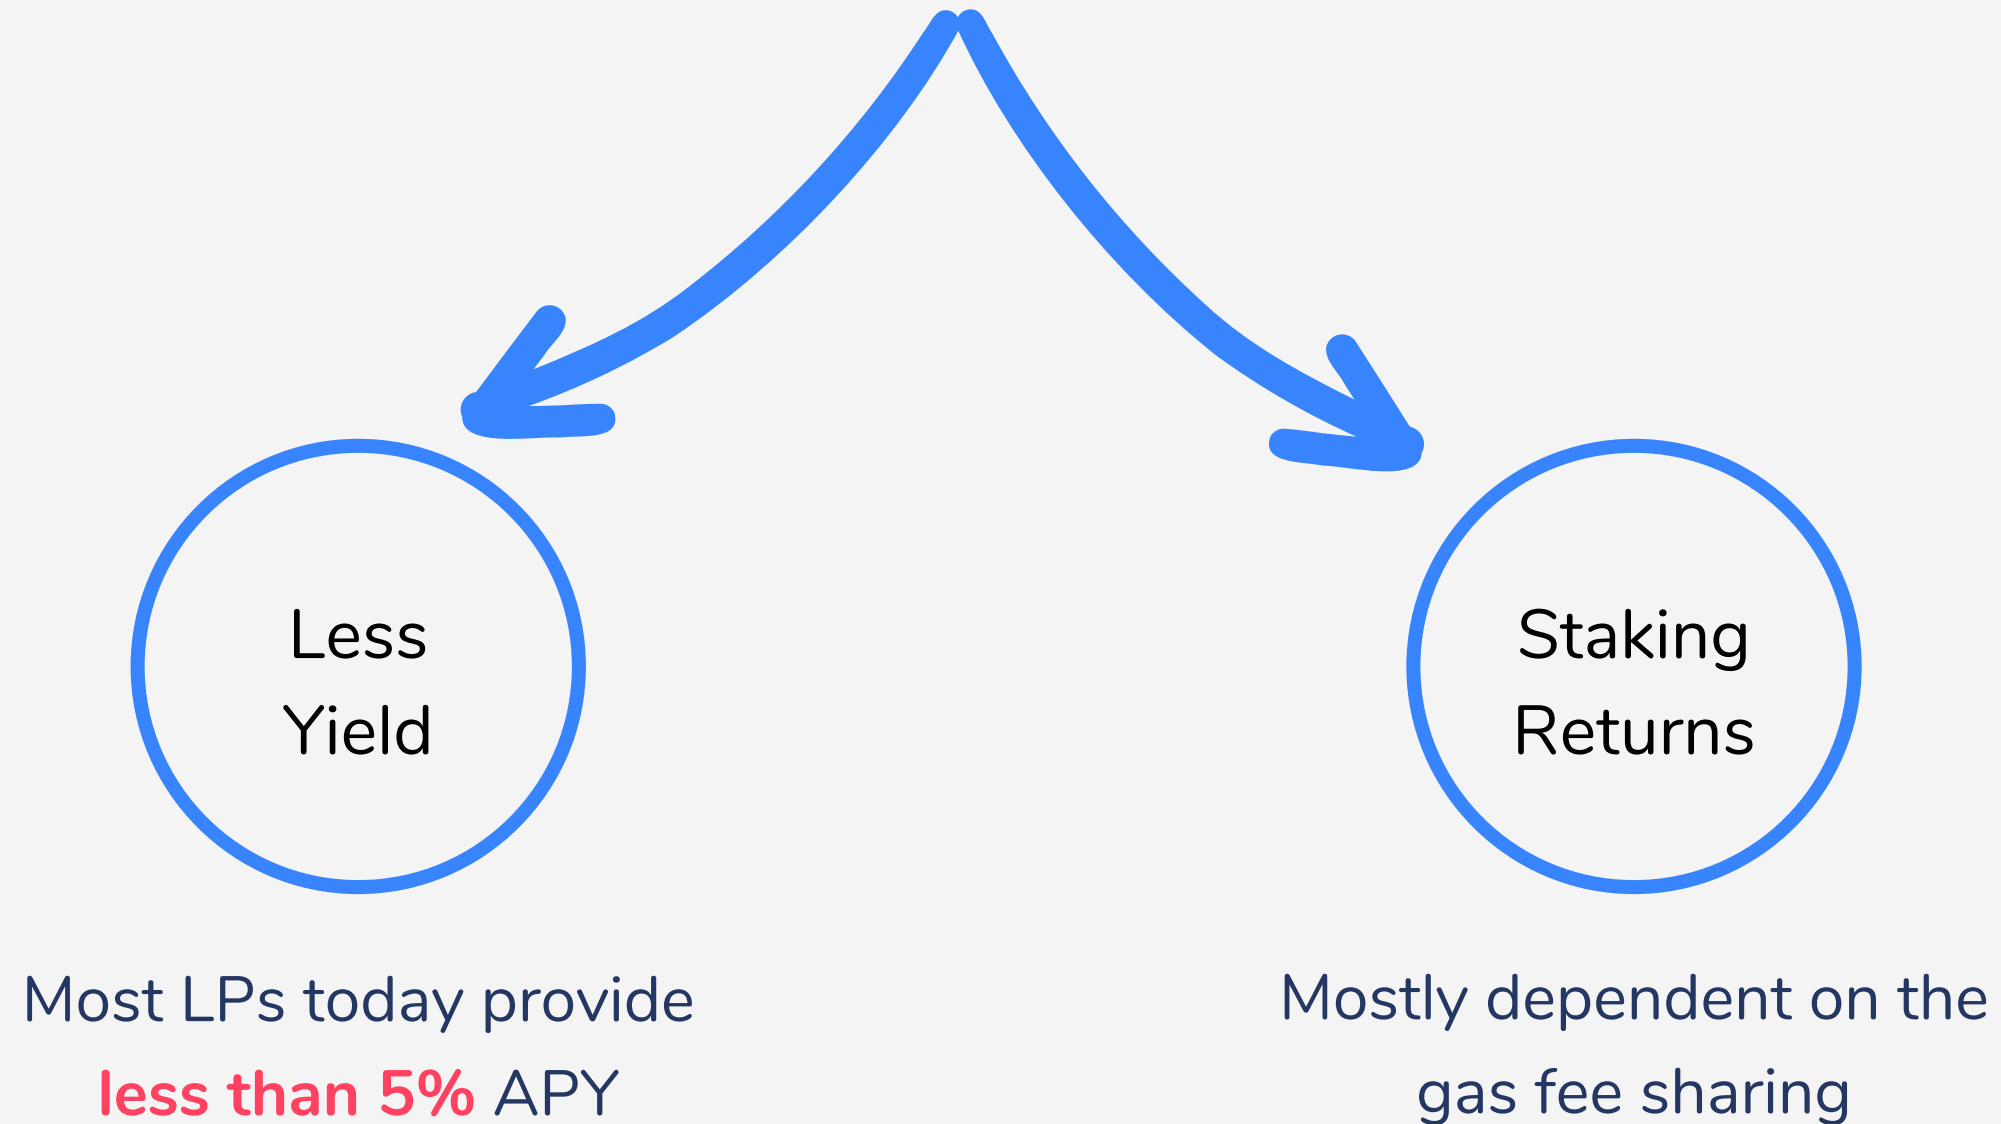

As individual members, they cannot negotiate better prices for their produce

Middlemen offer **25% lesser** than the Minimal Support Prices

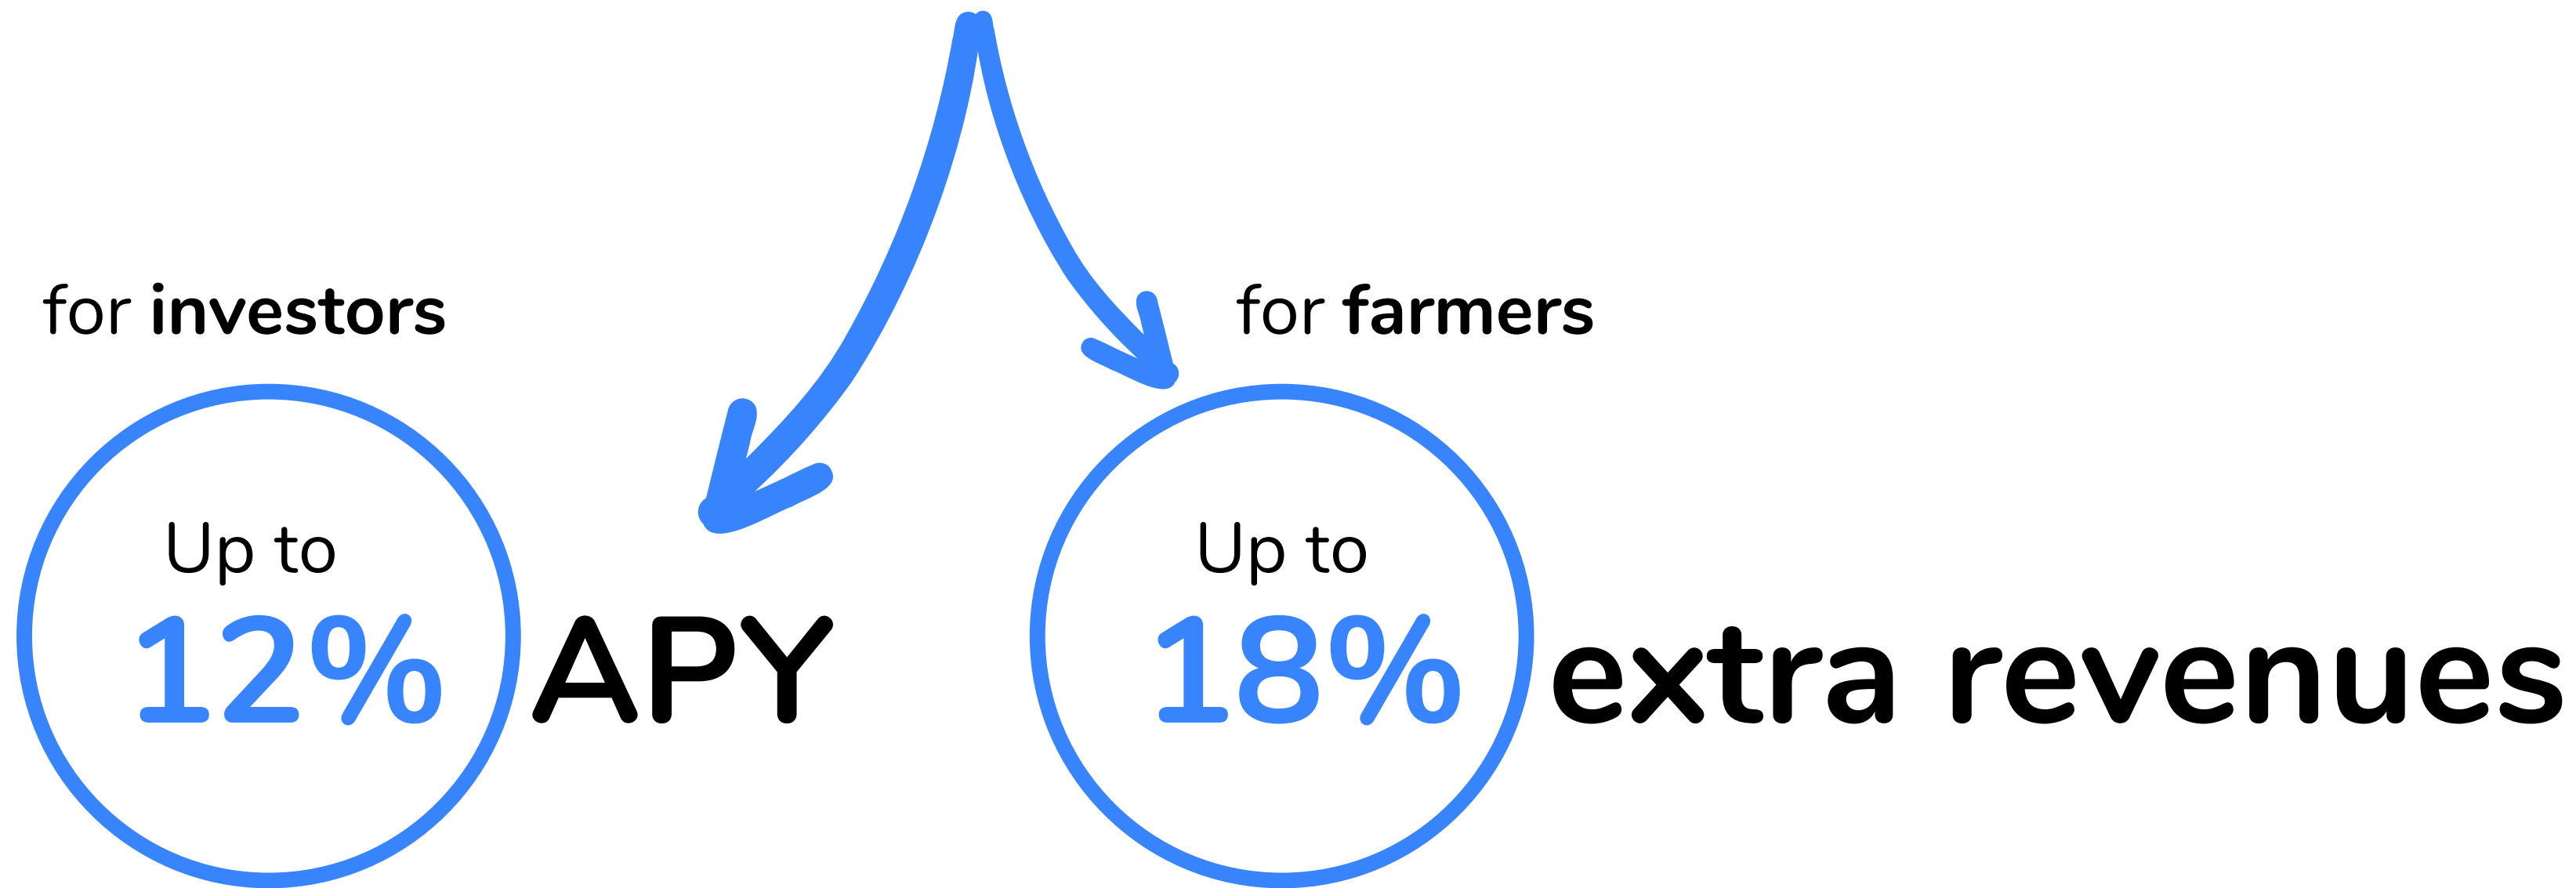

Problem (for Investors)

DeCentralized Finance (**Defi**) liquidity pools (**LPs**) do not leverage **#RWAs** to maximize **APY**

Liquid Staking Solution

#Ahan allows staking stablecoins against liquid **Real World Assets** (“Non-Perishable Agro Commodities”) that generates

Why Non-Perishable Agro Commodities?

Extended Shelf Life

They can be stored for extended periods without significant degradation

Significant Returns

Buying during 'Harvest' and selling at 'Peak' ensures higher returns

Market Size

USD 13.39 Trillion market for Agro Commodities (in 2023); projected to reach **USD 19.007 Trillion** by 2027

Source : The Business Research Company.

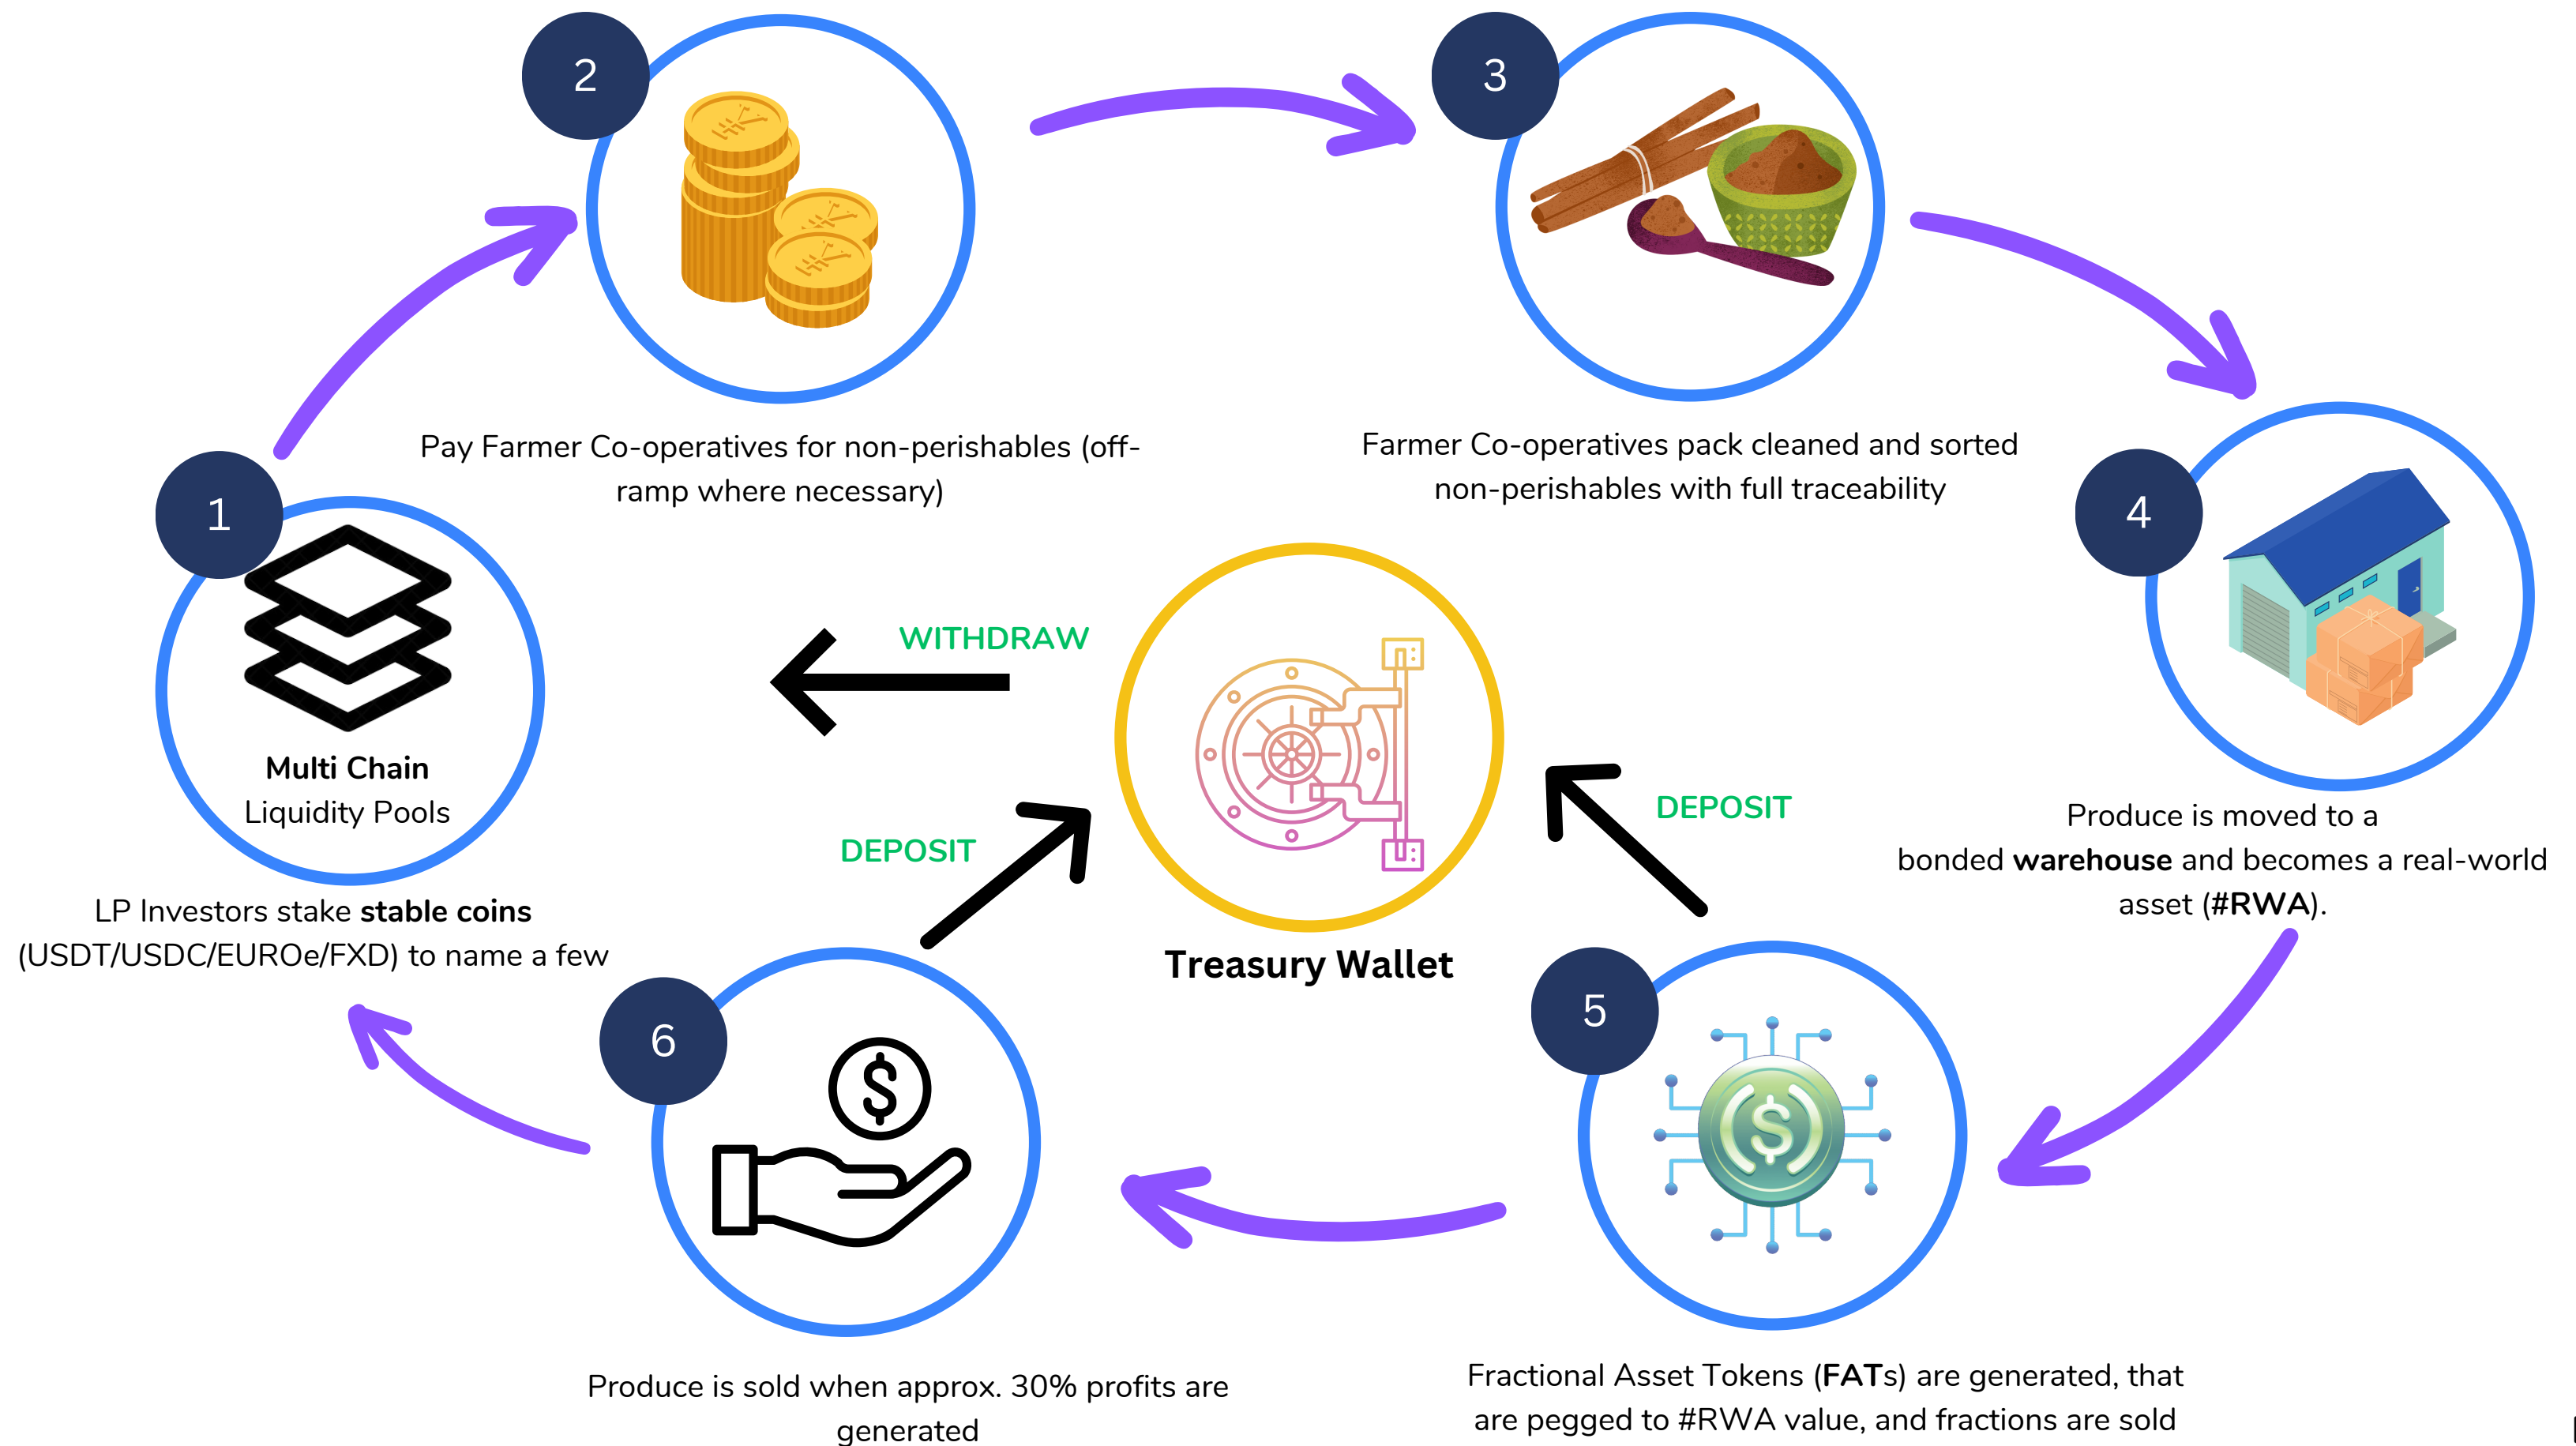

USD 1.14 Trillion market for Non-Perishable Agro Commodities (in 2023); projected to reach **USD 1.53 Trillion** by 2027

USD 61 Billion market for tokenization of Non-Perishable Agro Commodities by 2027

Source : Constitutes 4% of SAM

#Ahan System Flow

#Ahan Business Model

We have a **dual** revenue model

Avenue 1

Fees

We charge a **0.25%** fee while

- Staking Stable Coins
- UnStaking Stable Coins

Avenue 2

Reward Fee

We charge a **10%** fee while

- Claiming Daily Rewards

#Ahan and Layer 1 protocols

We generate **additional revenues** to the Layer 1 Liquidity Pools that we support

Gas Fee

L1 protocols earn Gas Fees for

- Deposit Transactions
- Withdrawal Transactions

#Ahan Token Utility

stTokens are minted against the staked 'stable coins'; and are burnt when users unstake the stable coins

Utility 1

Fractional Asset Token (FAT)

Represents the value of the Real World Asset stored in the warehouse and is equal to the number of 'staked stablecoins'

Utility 2

Compounding

Stake Liquid FATs in Ahan DeFi Ecosystem to compound users returns

#Ahan Token Utility

stTokens are minted against the staked 'stable coins'; and are burnt when users unstake the stable coins

Utility 1

Compounding

Stake Liquid Staking Tokens in Ahan DeFi Ecosystem to compound returns

Fractional Asset Tokens (FATs) are minted against the underlying Real-world Asset(RWA)

Utility 2

Fractional Ownership

Represents the value of the Real World Asset stored in the warehouse and is equal to the derived value of the underlying asset '

#Ahan Governance Model

AHAN foundation is proposed to be setup in Zug, Switzerland.

With **45%** of the tokens allocated to the AHAN foundation, the foundation plays a crucial role in the initial setup and development of the ecosystem. They hold the majority of control to ensure stability and direction.

Key responsibilities include:

- **Development and Upgrades:** The foundation oversees the development and improvement of the token protocol.
- **Strategic Decision-making:** Decisions related to the long-term vision, partnerships, and major changes in the token's utility fall under the foundation's jurisdiction.
- **Reserve Management:** The foundation manages a reserve fund to support ongoing development, marketing, and community initiatives.

Value Creation for DAO token holders:

AHAN DAO
holders are eligible
for yearly
DIVIDENDS

AHAN **DAO** token shall be
traded on major exchanges

#Ahan DAO Tokenomics

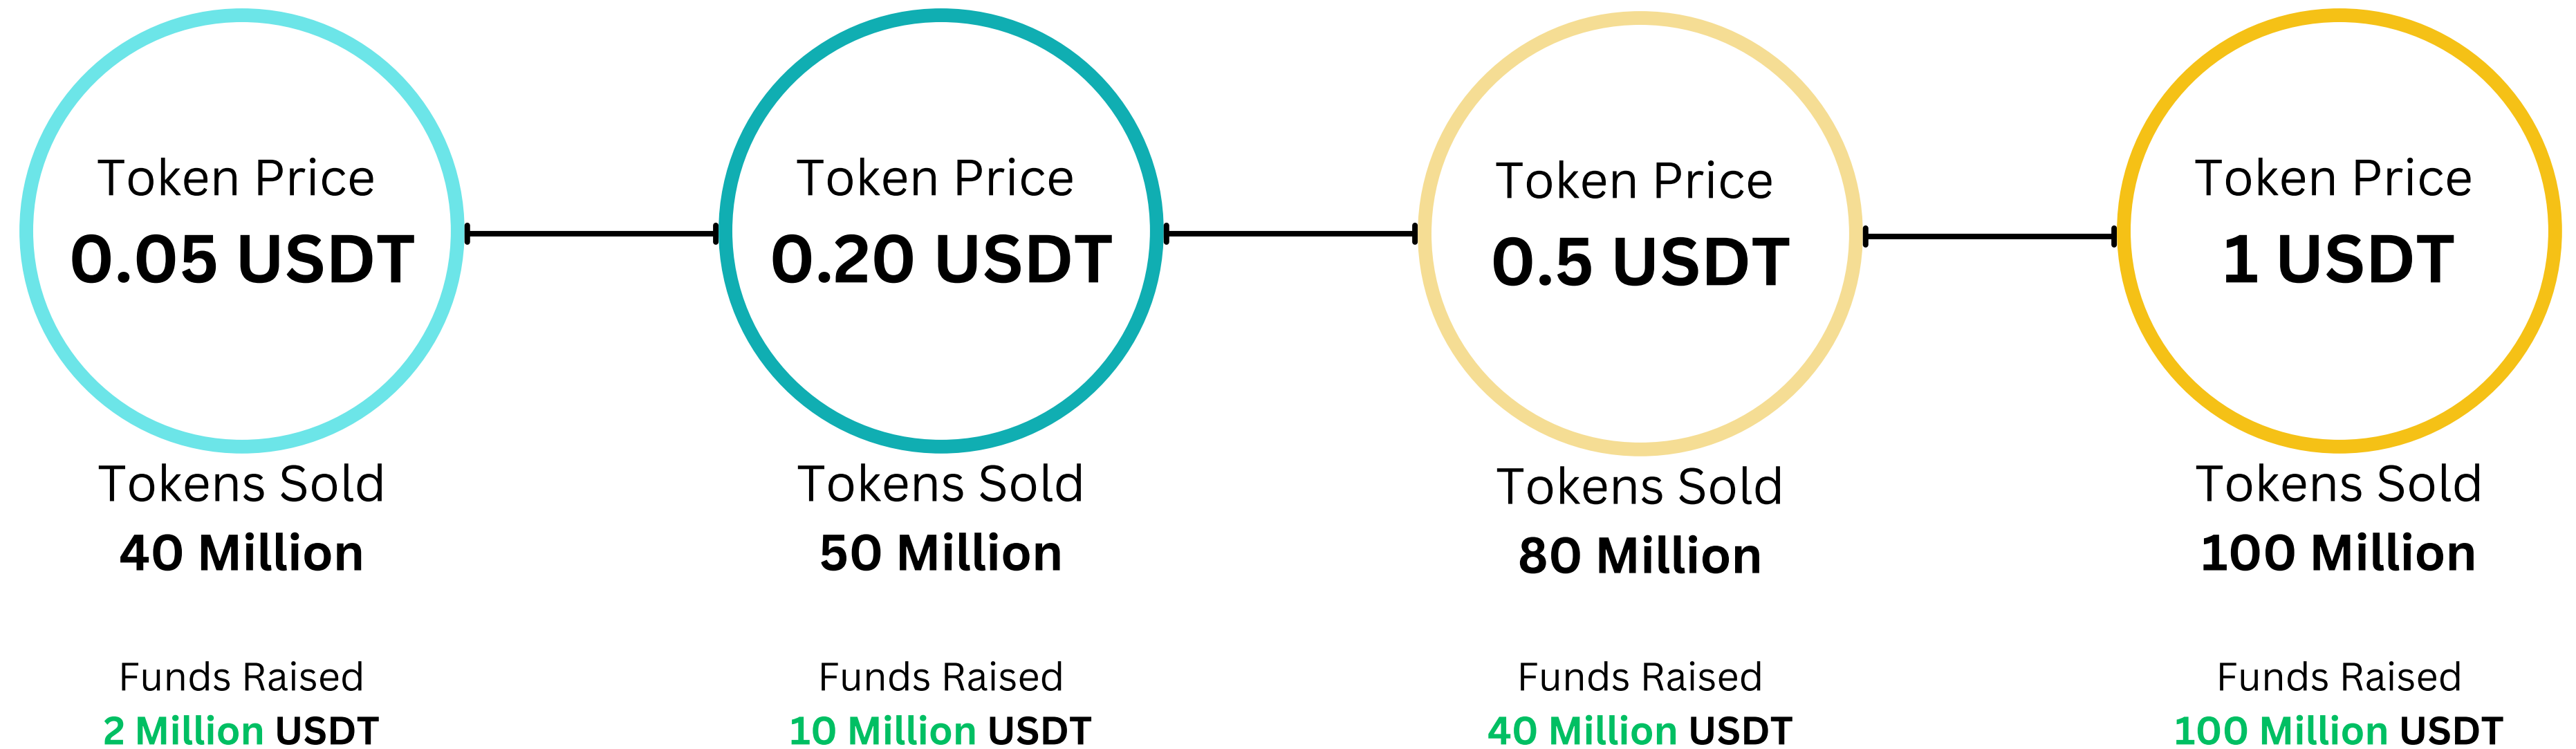

TOTAL SUPPLY: 1 BILLION
"AHN" GOVERNANCE TOKENS

1,000,000,000

#Ahan DAO TGE

A total of **270 Million Tokens** shall be sold in various tranches to raise capital for AHAN DAO

#Ahan DAO Funds Usage

As a Liquid Staking Solution, our primary focus lies in upholding a **92.1% liquidity** threshold within the **Cold Treasury Wallet**.
